

eziTracker Codebox

The eziTracker Codebox is a simple and effective solution to the rare occasions when a land line phone is not available at a client's home. It's a proven hassle free solution that enables the eziTracker monitoring service to be used for any homecare visit.

The Codebox is a small unobtrusive device (about the same length as a mobile phone) and is kept at the client's residence. The device generates an encoded eight digit validation number signifying the precise date and time (the code is updated on a frequent rotation cycle). When the carer arrives at the client's home he/she uses a mobile phone to text the validation number to eziTracker. At the end of the visit the carer repeats the process, texting the updated code.
