

eziTracker iButton

The eziTracker iButton offers a sophisticated alternative to the telephone for logging time & attendance on the eziTracker service. It is particularly well suited to attendance recording at locations where a large number of staff may be required to attend, such as care homes, day centres and supported living premises.

How it works

The eziTracker iButton system uses a neat unobtrusive terminal which is normally mounted on a wall. Staff login and logout of eziTracker by touching the terminal with their personal fob, the iButton, (which staff typically keep on their key ring.)

Each eziTracker iButton fob has a unique and unalterable code which is used to identify staff using the eziTracker service. Users simply place their iButton onto the terminal receptor and their code is read instantly. Visual and audio indicators provide immediate reassuring login/logout confirmation to the user. Time & attendance details for the individual are recorded instantly and sent to eziTracker in real time. All data is recorded and made available for authorised management in exactly the same fashion as it is with the eziTracker fixed line service.

Key Benefits

The instantaneous login/logout afforded by this system makes it appropriate for locations where a number of staff may be arriving or leaving at the same time, thus avoiding any possible delay if multiple staff had to login/logout using a single fixed line phone.

The system uses the mobile phone network and so can be used at locations where no fixed line telephone is available. No connection to a Local Area Network is necessary.

"The iButton is a neat device that complements the eziTracker hm product portfolio. Our customers can now choose a suitable time & attendance recording device for every situation."

Dave Currie – Sales Director
